## EU Critical Raw Materials (CRMA) Statement

Peppers Cable Glands Ltd acknowledges the requirements and objectives of the European Union Critical Raw Materials Act (CRMA) regarding the identification and supply security of critical and strategic raw materials.

Our products are primarily manufactured from standard industrial materials, including brass (copper alloys), stainless steel, and aluminium.

Certain materials used in our products, such as copper, are included within the EU list of Critical Raw Materials and are also classified as Strategic Raw Materials under the CRMA. These materials are present solely as constituent elements of widely used engineering alloys and are not intentionally incorporated in isolation or for functional dependency on their criticality.

The EU Critical Raw Materials Act does not currently impose:

- Restrictions on the use of listed materials in finished products.
- Maximum concentration thresholds.
- Mandatory substance declaration requirements for downstream manufacturers such as Peppers Cable Glands Ltd.

Accordingly, our products remain fully compliant with all applicable EU product regulations.

Peppers Cable Glands Ltd continues to:

- Source materials from established and reputable suppliers.
- Monitor regulatory developments relating to raw materials.
- Support transparency within the supply chain where reasonably practicable.

To the best of our knowledge, based on information provided by our suppliers and current legislation, our products do not present any compliance concerns under the EU Critical Raw Materials Act.

For and on behalf of Peppers Cable Glands Ltd.

Jeremy Betts  
Quality HSE Manager
